Status	Description
Cancelled	The cancelled status may be selected either by the SMART interface or the worker. Pre-requisite: Status must be Issued, Returned, Re-Issued, or Released.
Issued	This status is automatically assigned by the system via the SMART and EBT interfaces. Pre-requisite: Status must be Ready for Issuance or Submitted.
Ready for Issuance	This is the default status assigned by the system after the Eligibility Worker determines and accepts an EDBC payment authorization or a Payment Request. This Status is selected when the issuance record is created by the issuance batches (i.e. Monthly, Nightly, etc.), or in real time EBT Web Service
Reissued	The scenario for this status is worker initiated, but the system assigns this status after an issuance that was previously issued is reissued. Pre-requisite: Status must be Issued or Cancelled.
Released	This status is for tracking purposes and can be used in whichever way best fits the states' processes. This status is available when editing an issuance record in Returned status. This may be used after a returned benefit check is re-mailed or given back to the customer. Pre-requisite: Status must be Cancelled, Issued, or Returned.
Returned	This status is selected by the worker when processing warrants returned in the mail. Pre-requisite: Status must be issued.
Submission Error	This status is automatically assigned by the system or selected by a worker when an issuance fails after it is submitted through the outbound interfaces with SMART and EBT. Pre-requisite: Status must be Submitted or Ready for Issuance.
Submitted	This status is automatically assigned by the system when an issuance is submitted to the SMART and EBT interfaces. Pre-requisite: Status must be Ready for Issuance.
Validation Error	This status is automatically assigned by the system if the issuance fails system validations. Pre-requisite: Status must be Ready for Issuance.
Void	This status can be selected by the Worker when the Issuance is not valid. Pre-requisite: Status must be Validation Error, Submission Error, or Ready for Issuance.
