

MEDICAL AID CODES

Medical Aid Codes

Aid codes are a combination of the medical program, medical program subtype, individual medical subtype and SOBRA/Inmate indicators.

Aid Codes are made up of 7 characters. The first 3 characters are the type of coverage. The next 2 characters further define the category. The last 2 characters are Y/N fields to identify SOBRA and Inmates. SOBRA coverage is identified in the 6th position of the Aid Code. Inmate coverage is identified in the 7th position of the Aid Code.

For example, an aid code of CTM/PW/N/N would indicate Caretaker Medical by looking at the first 3 letters (CTM) of the Aid Code. The second set of letters (PW) indicates Pregnant Woman. SOBRA and Inmate are both "N" in this example.

300 Aid Codes

When the MDN/XX aid code is generated for a Long Term Care case this needs to be changed to a 300/XX aid code. The PMG aid codes do not require adjustment since these are already 300 aid codes. The SSI aid codes do not require adjustment since the aid code is at or below the SSI limit.

- 300/OA/N/N which translates to 300% of SSI Standard – Aged/Not SOBRA/Not Inmate
- 300 aid codes are required for LTC. See Medical Aid Codes for more information.
 - A consumer must have a 300 aid code for MMIS. When the user processes a case for Long Term Care the aid code is 300/XX if the consumer is under the 300% of the SSI limit on income. For 2021, this is \$2382.00 in monthly income. If the Consumer's income is more than \$2382.00 per month the consumer receives an MDN/XX aid code on the EDBC Summary. This aid code MUST be changed to the 300/XX aid code using the Medical Summary Override for benefits to be sent to the MMIS. Select the appropriate Medically Needy - below SSI Standard or Medically Needy - below SSI Standard Cost Share depending on the consumer's population (Aged, Blind, Child, or Disabled) and liability determination.
